Please cancel claim 9 without acquiescence in the Examiner's rejections and without prejudice to pursue in subsequent applications.

10.   (Amended) [The method of claim 9, comprising the further steps of] A method for transmitting information from a server to a client station in a mobile-based client-server system, comprising:

[prior to transmitting the message,] evaluating the information at the server to determine whether the information is of a selected type and quantity[.] ; and

transmitting a message from a transceiver associated with the server to a transceiver associated with the client station if the information is of a selected type and quantity, the message indicating the server has information for the client station.

11.   (Amended) The method of claim [9] 10, comprising the further steps of:

evaluating a received message at the client station to determine whether the information is of a selected type; and

establishing a connection between the client station and server in response to a received message if the information is of a selected type.

12.   (Amended) The method of claim [9] 10, comprising the further steps of:

evaluating a received message at the client station to determine whether the information is of a selected quantity; and

establishing a connection between the client station and server in response to a received message if the information is of a selected quantity.

Please cancel claims 13-15 without acquiescence in the Examiner's rejections and without prejudice to pursue the subject matter of claims 13-15 in a subsequent application.

19.   (Amended) A mobile-based client-server system, comprising:
